

Rexchip Earns its Third Consecutive Enterprises Environmental Protection Award

October 28, 2011

Rexchip Electronics Corp. (4932) is a leading edge DRAM manufacturer in Taiwan. Its 300mm fabrication facility utilizes the most advanced technology to manufacture high density and high performance DRAM products. On Oct. 28th, Rexchip earned its third consecutive enterprises environmental protection award and will receive this honor directly from President Ma Ying-Jeou in person in November.

Since the construction of the first 12" fabrication facility (FAB R1) began, Rexchip has considered environmental protection, sustainable development and reducing waste is important to establishing corporate social responsibility and is committed to pollution prevention planning as well as strengthening waste production management and recycling. In order to provide more information regarding Rexchip's faith and commitment to sustainable development, it published the first Corporate Social Report (CSR) in August, 2011. This report not only presents the positive results from operational, environmental and social performance in 2010, but also declared the company's goal to continuously improve its performance and become a persistent leader in society.

During the last year, Rexchip through the purchase of new equipment and energy saving policies set a new record in water and power usage savings. In FAB R1, the power and water consumption and PFC emission per wafer was the lowest among Taiwan semiconductor manufactures. The waste recycling rate had also reached 96.7%, a new record. Meanwhile, Rexchip has continuously improved our employees' energy saving awareness and further promoted these concepts locally.

The road to sustainable development is one without end. However Rexchip will continue to improve its performance in environmental protection and transparently disclose information regarding its operational, social and environmental achievements. At a steady pace and with a responsible attitude, Rexchip aims to become a persistent leader in society to carry forward the spirit of sustainable development and influencing others through education and through positive momentum.
